HZ-RLS-60L-50P

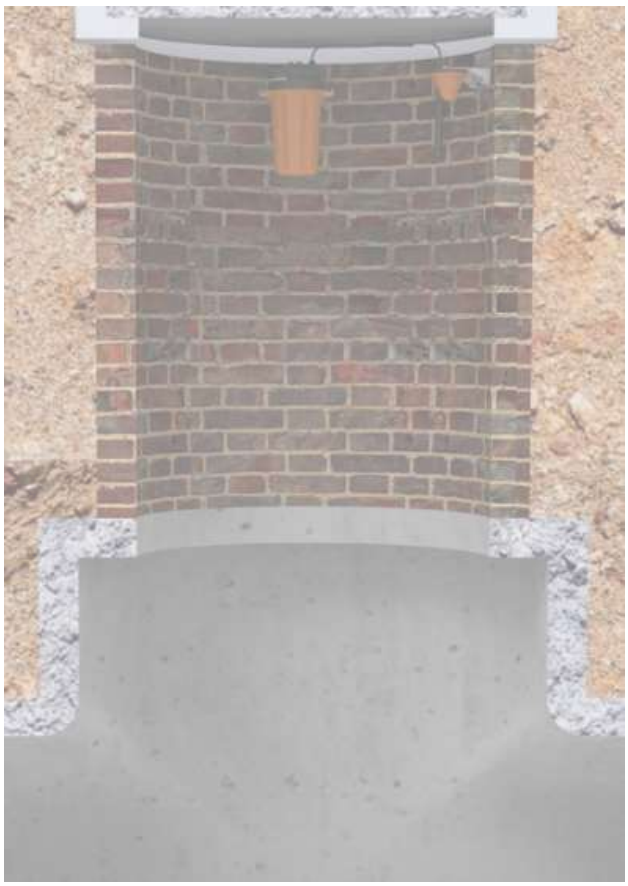

Drainage radar water level gauge

Product introduction:

HZ-RLS-60L-50P drainage radar water level gauge is a liquid level monitoring device designed specifically for urban drainage systems. The measurement process is not affected by temperature, humidity, pollutants, and floating objects on the water surface.

It has technical characteristics such as high accuracy, low power consumption, and small size. This product is suitable for scenarios such as manholes, drainage pump stations, gates, and sewage outlets, and can provide stable and reliable online monitoring of liquid levels in pipelines and culverts.

Technical parameters:

1. Radar ranging range: 10m
2. Radar ranging accuracy: ±1cm
3. Radar ranging resolution: 1mm
4. Radar ranging frequency: 60GHz
5. Radar ranging beam angle: 4°
6. Working voltage: DC6-30V
7. Working temperature: -30 ~+60 ℃
8. Communication interface: RS485, Modbus
9. Product size: Φ96×88mm
10. Protection level: IP68
